Dr. Peters Coming.

The senson of 1966-1996 of the Wednessay Club will be opened next Tuesday night under particularly favorable conditions. Dr. R. H. Peters, of Boston, the new director of the chorus, will be present. It is not believed that he will be able to determine finally on Tuesday night what the work of the chorus will be for the May festival unless there is a full attendance of the musical talent on hand that night.

The Wednesday Club is much encouraged in preparing for the season by the large number who have this year manifested a decided interest in having the work in music advance and in the elements of musical taste. The lovers of festival music will recall with much pleasure some of the notable production in the last few years which have been rendered in Richmond, particularly Mendelssohn's "Elljah," on account of the seclence of its performance under the direction of Mr. W. C. Mercer, also Mendelssohn's "Hymns of Praise" and cautatas under the able direction of Mr. Arthur Scrivenor, in which its secess was continuous, and followed by Handels Mr. G. B. Gookins as director in 1994.

"He had a plurality," said the Governor, "but a clear majority of the bar endorsed others for the position."

The Governor will make as many speeches in the campaign this fall as his official engagement will permit.

The Glasgow (Scottand) Herald says:
"The story is one of distinct and continuous interest. It is concerned with characters and situations that are at once fresh and engaging, and it reveals observing powers and descriptive facility of no common order. At the root of the study lies the question of heredity, and the illustrative details are designed to show what a man may make of his opportunities with original temperament and individual energy to guide him towards his finished product. This is, of course, the theme that has been handled by the psychological artist from the dawn of creative literature, and the novelty in the present case consists in the fact that the author successfully responds to Horace's dictum and treats the common-place after a fashion of his own. He finds his material and secluded, and primitive conditions, places it so as to show its inherent strength and value, and hereafter, by dextrous and relevant manipulation, covers—with the glory of which it is fairly susceptible. The various characters, especially those of a strictly primitive type, are strongly vitalised, and the closing sections of the story-are particularly bright and effective."
